

Measure

Be thorough when measuring

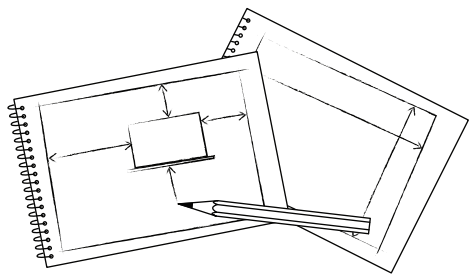

It's not hard to measure the space where you plan to install your television, but it's important that you get it right. Your accurate measurements will be the basis for all your planning.

Give yourself plenty of time to measure precisely. Make sure to include fractions of an inch to ensure your television fits perfectly in the corner.

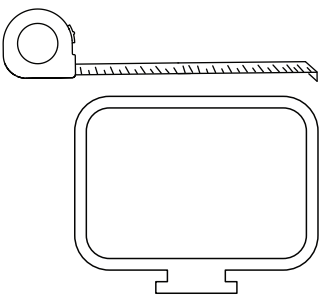

Measuring your television

1 Have proper tools handy — pen, paper and measuring tools.

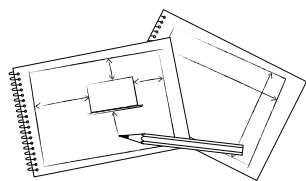

2 Draw your room layout on a sheet of paper. We recommend having one piece of paper for each television/corner combination.

3 Measure the width of your television or TV stand. This is the only measurement needed to get an exact SIACS™ result.

Television measuring and tools

Take your own measurements:

A great corner plan starts by taking accurate measurements. To measure your television yourself, follow steps 1–3 on this page.

Television measuring service:

Need help measuring your television? Our measurement technician will visit your location to measure the size and document the dimensions.
